**From:** Duncan Halstead, [duncanh@aercoustics.com](mailto:duncanh@aercoustics.com)  
**Subject:** Almonte 2 Acoustic Assessment Report  
Aercoustics Project #: 23021.03  
**Date:** September 20, 2024

---

This memorandum is provided to confirm the following report demonstrates that the proposed development will comply with the Ministry of the Environment, Conservation and Parks (MECP) noise guidelines NPC-300.

EASR Acoustic Assessment Report – Almonte 2 Battery Energy Storage Site,  
dated September 20, 2024

While the report adheres to the EASR Publication as it's principal regulatory framework, the assessment methodology used in the report also complies with NPC-300. Stationary noise sources are the only noise source of concern in this development. The development will not produce any significant transportation noise sources, and the lack of sensitive noise receptors inside the proposed development makes irrelevant any external impacts of transportation noise sources on the development itself.

Sincerely,

**AERCOUSTICS ENGINEERING LIMITED**
