Attention: **Mr. John Richard Southwell**

Subject: **Environmental Action Plan**
Supplemental Groundwater Sampling Program
116-122 Old Mill Lane
Appleton, Ontario

Dear Sir,

As per the Environmental Action Plan (Report No. PE1114-MEMO.13, dated November 14, 2017) Paterson Group (Paterson) carried out a Supplemental Groundwater Sampling Program at the aforementioned site. The purpose of the sampling program was to confirm the groundwater quality at the subject property and update the findings of the March and June 2018 groundwater sampling events, as per comments provided by Stantec Consulting Ltd. on May 10, 2018. The findings of the supplemental groundwater sampling program are summarized in the following report.

Background Information

The subject property is located at the western end of Old Mill Lane, south of the Mississippi River, in Appleton, Ontario. The site currently consists of vacant, undeveloped land, whereas the surrounding lands consist of vacant land or provincially significant wetlands, with some residential land to the east and south. The subject site and surrounding properties are serviced with private potable wells and septic systems.

An environmental remediation program was carried out for the subject property during the interim of April 2007 through October 2010, and two (2) records of site condition (RSCs) were subsequently filed in the Environmental Site Registry (ESR): RSC #97711 covers the bulk of the subject site and RSC #102721 is for the 30 m buffer area along the banks of the Mississippi River. The environmental condition of the subject property at the time the RSCs were filed, was in accordance with the then applicable 2004 MOECC Table 1 and Table 2 standards.

The current groundwater results at the subject property will be compared to both the 2004 MOECC Table 1 and Table 2 standards, as well as the contemporary MECP Table 6 and Table 8 standards, currently applicable to the property.

Subsurface Investigation (2018)

Prior to conducting the 2018 subsurface investigation, Paterson confirmed that the monitoring wells installed in 2008 (MW1-08, MW2-08, MW4-08 and MW5-08) were no longer present on the subject property. These wells were decommissioned during the site remediation program.

On March 16, 2018, two boreholes (BH1-18 and BH2-18) were placed on the subject property, within the former remedial area along the bank of the Mississippi River (area of former mill building). The boreholes were extended to depths of approximately 10.6 m and 7.1 m below existing grade, respectively. The boreholes were completed using a track-mounted CME 55 Power Auger drill rig, under the full time supervision of Paterson personnel. The boreholes were advanced into the bedrock, using a diamond coring system, and completed with monitoring well installations to access the groundwater table.

The borehole locations are identified on Drawing PE1114-8 – Test Hole Location Plan, appended to this report. The depths at which the split spoon and rock core samples were obtained from the test holes are shown as **"SS"** and **"RC"** on the Soil Profile and Test Data sheets, attached to this report.

Monitoring Well Installation

Groundwater monitoring wells were installed in BH1-18 and BH2-18, the locations of which can be seen on the attached Test Hole Location Plan. Typical monitoring well construction details are described below;

- Slotted 32 mm diameter PVC screen at base of borehole
- 32 mm diameter PVC riser pipe from the top of the screen to ground surface.
- No.3 Silica sand backfill within annular space around the screen.
- Bentonite above sand pack to just below ground surface.
- PVC riser.

Refer to the Soil Profile and Test Data sheets attached for the actual well construction details for BH1 and BH2.

Groundwater monitoring wells were developed upon installation using dedicated purging equipment (footvalves and dedicated polytubing). A minimum of three well volumes were removed from the monitoring wells or until the monitoring well was dry.

Subsurface Profile

Fill material from ground surface to depths of approximately 7.0 m and 1.8 m below grade, was identified at BH1-18 and BH2-18, respectively. A thin layer of topsoil was identified at grade, at BH2-18. The fill material consisted of topsoil or silty sand mixed with gravel, cobbles, and boulders. This fill was a result of backfilling the remediation excavation with clean imported pit run from an aggregate pit. The specific details of the soil profile at the test hole locations are presented on the attached Soil Profile and Test Data sheets.

Groundwater Sampling (2018 & 2021)

Groundwater sampling protocols were followed using the MECP document entitled, *"Guidance on Sampling and Analytical Methods for Use at Contaminated Sites in Ontario"*, dated May 1996. Standing water was purged from each monitoring well prior to the recovery of the groundwater samples using dedicated sampling equipment. The samples were then stored in coolers to reduce possible analyte volatilization during their transportation.

Groundwater sampling was carried out at BH1-18 and BH2-18 on March 27 and June 7, 2018. These samples were submitted for analysis of BTEX and/or PHC (F_1-F_4) parameters.

A third groundwater sampling event was carried out more recently on December 7 and December 8, 2021, which also included the test wells installed as part of the hydrogeological investigation (TW1-TW3). These samples were submitted for analysis of BTEX, PAHs, metals, PCBs, as well as dioxins/furans parameters.

Field Measurement of Water Quality Parameters

Prior to groundwater sampling, water quality parameters (temperature, electrical conductivity, and pH) were measured in the field using a multi-parameter analyzer. The wells were purged prior to sampling until at least three well volumes had been removed or until the well was purged dry. The field parameter values were measured after each of the three well volumes were removed from the monitoring well, until field chemistry parameters had stabilized (within 10% of the two previous measured values). The groundwater quality pen was cleaned using distilled water after each time it was used to record groundwater parameters.

The field chemistry values measured during the June 2018 sampling event are summarized below in Table 1.

Table 1
Field Measurement of Water Quality Parameters
June 7, 2018

Parameter	BH1-18	BH2-18
Temperature (°C)	8.7	9.2
pH (units)	7.6	7.5
Electrical Conductivity (mS/cm)	12.1	12.3

Analytical Test Results

Groundwater Standards

The site condition standards for the subject property were obtained from Table 6 and Table 8 of the document entitled, *"Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act"*, prepared by the Ministry of the Environment, Conservation and Parks (MECP), and dated April 15, 2011. The selected MECP standards are based on the following considerations:

- ❒ Shallow soil conditions;
- ❒ Coarse-grained soil conditions;
- ❒ Potable groundwater conditions;
- ❒ Residential land use.

It should be noted that all lands within a 30 m buffer area along the river shoreline and the limit of the adjacent wetland are qualified as a sensitive area. The location of BH2-18 lies within this 30 m buffer area, for which the MECP Table 8 standards are deemed to be applicable. For the remainder of the subject site, the MECP Table 6 standards are deemed to be applicable based on the future residential land use and potable groundwater conditions of the site.

Paracel Laboratories (Paracel), of Ottawa, Ontario, performed the laboratory analysis on the samples submitted for analytical testing. Paracel is a member of the Standards Council of Canada/Canadian Association for Laboratory Accreditation (SCC/CALA) and is accredited and certified by the SCC/CALA for specific tests registered with the association.

Groundwater

Groundwater samples were collected from the monitoring wells installed in BH1-18 and BH2-18 on March 27 and June 7, 2018 and submitted for laboratory analysis of BTEX and PHC (F_1-F_4) parameters.

No visual or olfactory indications of any petroleum hydrocarbons were observed in the groundwater samples recovered during the sampling event.

The results of the analytical testing are presented below in Table 2, as well as on the laboratory certificates of analysis appended to this report.

Table 2
Analytical Test Results – Groundwater

- nd – not detected above the MDL
- *** -** Situated within the 30 m buffer of the Mississippi River, therefore MECP Table 8 standards apply
- Underlined – Results exceed selected MECP Table 8 standards.
- **Bold & Underlined** – Results exceed selected MECP 6 standards.

No BTEX or PHC parameters were detected above the laboratory method detection limits in the groundwater samples analysed during the March or June sampling events. The groundwater samples are in compliance with the MECP Table 8 and MECP Table 6 standards, as well as the previous 2004 MOECC Table 1 and Table 2 standards used for the subject site in the RSC.

A third groundwater sampling event was carried out on December 7 and December 8, 2021. At that time, groundwater samples were collected from the monitoring wells installed in BH1-18 and BH2-18, as well as from three potable drinking water test wells (TW1-TW3) which had been installed on-site in 2015, and submitted for laboratory analysis of BTEX, PAHs, metals, PCBs, as well as dioxins/furans parameters.

No visual or olfactory indications of any petroleum hydrocarbons were observed in the groundwater samples recovered during the sampling events.

The results of the analytical testing are presented below in Tables 3 to 7, as well as on the laboratory certificates of analysis appended to this report.

All reported dioxin and furans toxicity equivalent values are in compliance with the MECP Table 8 and MECP Table 6 standards as well as the previous 2004 MOECC Table 1 and Table 2 standards used for the subject site in the RSC.

Assessment

A supplemental groundwater sampling program was completed for the subject property, as per the 2017 Environmental Action Plan prepared by Paterson, as well as the comments noted in Stantec's review.

Previously installed monitoring wells MW1-08, MW2-08, MW4-08 and MW5-08, situated within the former remedial area along the bank of the Mississippi River, are no longer present on the subject site. On March 16, 2018, two boreholes (BH1-18 and BH2-18) were drilled on the subject site, in the vicinity of the former monitoring wells and mill building.

The boreholes were drilled into the bedrock and instrumented with groundwater monitoring wells upon their completion.

Groundwater samples from BH1-18 and BH2-18 were recovered on March 27, 2018 and submitted for analysis of petroleum hydrocarbon (PHCs F_1-F_4) parameters. No visual or olfactory indications (such as a hydrocarbon sheen) were noted in the groundwater during the sampling event. A second groundwater sampling event was conducted on June 7, 2018. At this time, groundwater samples recovered from BH1-18 and BH2-18 were submitted for analysis of benzene, toluene, ethylbenzene and xylene (BTEX) and PHC parameters. The groundwater samples were in compliance with the MECP Table 8 and MECP Table 6 standards, as well as the previous 2004 MOECC Table 1 and Table 2 standards used for the subject site in the RSC.

A third groundwater sampling event was carried out on December 7 and December 8, 2021. At that time, groundwater samples were collected from the monitoring wells installed in BH1-18 and BH2-18, as well as from three potable drinking water test wells (TW1-TW3) which had been installed on-site in 2015, and submitted for laboratory analysis of BTEX, PAHs, metals, PCBs, as well as dioxins/furans parameters. No visual or olfactory indications of any petroleum hydrocarbons were observed in the groundwater samples recovered during the sampling event. Based on the analytical test results, the groundwater samples are in compliance with the MECP Table 8 and MECP Table 6 standards, as well as the 2004 MOECC Table 1 and Table 2 standards.

Based on the findings of the groundwater sampling programs, it is our opinion that the groundwater has not been impacted by past on-site activities.

Recommendations

Soil Management

As per the Environmental Action Plan issued by Paterson Group in November 2017, it is recommended that any soil remaining on-site be assessed by Paterson personnel at the time of site redevelopment, to ensure compliance with the applicable MECP soil standards. The soil management plan is appended to this report.

Monitoring Wells

If the monitoring wells installed onsite are not going to be used in the future, they should be abandoned according to Ontario Regulation 903. At this time however, it is recommended these wells not be abandoned, in case future groundwater monitoring is required.

Statement of Limitations

The client should be aware that any information pertaining to the soils and all test hole logs are furnished as a matter of general information only and test hole descriptions or logs are not to be interpreted as descriptive of conditions at locations other than those described by the test holes themselves.

This report was prepared for the sole use of Southwell Homes Ltd. Permission from Southwell Homes Ltd. and Paterson will be required to release this report to any other party.

We trust that information meets your immediate requirements.

Soil Management Plan

Applying Standards for Material Classification

The testing and beneficial reuse of site generated material will be evaluated and approved by Paterson personnel under the direction of a Qualified Person (QP). An environmental engineer will evaluate the suitability of material reused at the subject site.

- Based on the results of remedial program, it is not expected that material exceeding applicable standards will be encountered, however, if any excavated material exceeds the 2004 MOECC Table 2 standards, it will be removed from site for disposal at an approved waste disposal facility. Prior to sending such soil to the approved waste disposal facility, a soil sample will be collected and will be submitted for a Toxicity Characteristic Leaching Procedure (TCLP). Following approval from the approved waste disposal facility, any such soil will be transported directly to the facility.

  If encountered, any inert deleterious fill material (concrete) will be loaded into trucks and transferred to an approved waste disposal facility.

- Excavated material that is in compliance with the site standards may be reused on-site for backfilling or grading purposes, provided it is acceptable from a geotechnical perspective. If such soil cannot be reused on-site, the soil may be disposed of at an alternate site provided that the receiving site will accept the material.

Soil Identification Personnel

Paterson personnel will assist with the identification and testing of the soil.

Paterson will provide a representative under the supervision of the Qualified Person (QP) to visually inspect soil conditions and take soil samples for analysis upon request. A geotechnical engineer will be provided to assess the suitability of material used as backfill within the excavations.

Testing and Parameters for Soil Placed on Lots

Prior to any soil being placed on proposed lots, a sampling program will be carried out to recover representative soil samples for the analysis of selected parameters. Laboratory results are typically available within five business days.

Communication Procedure/Unexpected Impacts

If any of the soil encountered during excavation activities displays characteristic signs of contamination (i.e. odour, colour), samples will be submitted for confirmatory analysis. The contaminants of concern identified in the previous remedial program will include metals and PHCs. Material that is believed to be impacted will be segregated on-site until test results are received confirming its quality. If suspected impacted soil will be temporarily stockpiled on-site.

Southwell Homes Ltd. will be notified by Paterson immediately after identifying potentially impacted material.

Waste Disposal Facility

All excess material that does not comply with the selected site standards will be hauled to an approved waste disposal facility, otherwise all soil will be reused on-site.

SYMBOLS AND TERMS

SOIL DESCRIPTION

Behavioural properties, such as structure and strength, take precedence over particle gradation in describing soils. Terminology describing soil structure are as follows:

Desiccated	-	having visible signs of weathering by oxidation of clay minerals, shrinkage cracks, etc.
Fissured	-	having cracks, and hence a blocky structure.
Varved	-	composed of regular alternating layers of silt and clay.
Stratified	-	composed of alternating layers of different soil types, e.g. silt and sand or silt and clay.
Well-Graded	-	Having wide range in grain sizes and substantial amounts of all intermediate particle sizes (see Grain Size Distribution).
Uniformly-Graded	-	Predominantly of one grain size (see Grain Size Distribution).

The standard terminology to describe the relative strength of cohesionless soils is the compactness condition, usually inferred from the results of the Standard Penetration Test (SPT) 'N' value. The SPT N value is the number of blows of a 63.5 kg hammer, falling 760 mm, required to drive a 51 mm O.D. split spoon sampler 300 mm into the soil after an initial penetration of 150 mm. An SPT N value of "P" denotes that the split-spoon sampler was pushed 300 mm into the soil without the use of a falling hammer.

Compactness Condition	'N' Value	Relative Density %
Very Loose	<4	<15
Loose	4-10	15-35
Compact	10-30	35-65
Dense	30-50	65-85
Very Dense	>50	>85

The standard terminology to describe the strength of cohesive soils is the consistency, which is based on the undisturbed undrained shear strength as measured by the in situ or laboratory shear vane tests, unconfined compression tests, or occasionally by the Standard Penetration Test (SPT). Note that the typical correlations of undrained shear strength to SPT N value (tabulated below) tend to underestimate the consistency for sensitive silty clays, so Paterson reviews the applicable split spoon samples in the laboratory to provide a more representative consistency value based on tactile examination.

Consistency	Undrained Shear Strength (kPa)	'N' Value
Very Soft	<12	<2
Soft	12-25	2-4
Firm	25-50	4-8
Stiff	50-100	8-15
Very Stiff	100-200	15-30
Hard	>200	>30

SYMBOLS AND TERMS (continued)

SOIL DESCRIPTION (continued)

Cohesive soils can also be classified according to their "sensitivity". The sensitivity, S_t, is the ratio between the undisturbed undrained shear strength and the remoulded undrained shear strength of the soil. The classes of sensitivity may be defined as follows:

Low Sensitivity:	$S_t < 2$
Medium Sensitivity:	$2 < S_t < 4$
Sensitive:	$4 < S_t < 8$
Extra Sensitive:	$8 < S_t < 16$
Quick Clay:	$S_t > 16$

ROCK DESCRIPTION

The structural description of the bedrock mass is based on the Rock Quality Designation (RQD).

The RQD classification is based on a modified core recovery percentage in which all pieces of sound core over 100 mm long are counted as recovery. The smaller pieces are considered to be a result of closely-spaced discontinuities (resulting from shearing, jointing, faulting, or weathering) in the rock mass and are not counted. RQD is ideally determined from NQ or larger size core. However, it can be used on smaller core sizes, such as BQ, if the bulk of the fractures caused by drilling stresses (called "mechanical breaks") are easily distinguishable from the normal in situ fractures.

RQD %	**ROCK QUALITY**
90-100	Excellent, intact, very sound
75-90	Good, massive, moderately jointed or sound
50-75	Fair, blocky and seamy, fractured
25-50	Poor, shattered and very seamy or blocky, severely fractured
0-25	Very poor, crushed, very severely fractured

SAMPLE TYPES

SS	-	Split spoon sample (obtained in conjunction with the performing of the Standard Penetration Test (SPT))
TW	-	Thin wall tube or Shelby tube, generally recovered using a piston sampler
G	-	"Grab" sample from test pit or surface materials
AU	-	Auger sample or bulk sample
WS	-	Wash sample
RC	-	Rock core sample (Core bit size BQ, NQ, HQ, etc.). Rock core samples are obtained with the use of standard diamond drilling bits.

SYMBOLS AND TERMS (continued)

PLASTICITY LIMITS AND GRAIN SIZE DISTRIBUTION

WC%	-	Natural water content or water content of sample, %
LL	-	Liquid Limit, % (water content above which soil behaves as a liquid)
PL	-	Plastic Limit, % (water content above which soil behaves plastically)
PI	-	Plasticity Index, % (difference between LL and PL)
Dxx	-	Grain size at which xx% of the soil, by weight, is of finer grain sizes These grain size descriptions are not used below 0.075 mm grain size
D10	-	Grain size at which 10% of the soil is finer (effective grain size)
D60	-	Grain size at which 60% of the soil is finer
Cc	-	Concavity coefficient = $(D30)^2$ / (D10 x D60)
Cu	-	Uniformity coefficient = D60 / D10

Cc and Cu are used to assess the grading of sands and gravels:
Well-graded gravels have: $1 < Cc < 3$ and $Cu > 4$
Well-graded sands have: $1 < Cc < 3$ and $Cu > 6$
Sands and gravels not meeting the above requirements are poorly-graded or uniformly-graded.
Cc and Cu are not applicable for the description of soils with more than 10% silt and clay
(more than 10% finer than 0.075 mm or the #200 sieve)

CONSOLIDATION TEST

p'_o	-	Present effective overburden pressure at sample depth
p'_c	-	Preconsolidation pressure of (maximum past pressure on) sample
Ccr	-	Recompression index (in effect at pressures below p'_c)
Cc	-	Compression index (in effect at pressures above p'_c)
OC Ratio		Overconsolidaton ratio = p'_c / p'_o
Void Ratio		Initial sample void ratio = volume of voids / volume of solids
Wo	-	Initial water content (at start of consolidation test)

PERMEABILITY TEST

k	-	Coefficient of permeability or hydraulic conductivity is a measure of the ability of water to flow through the sample. The value of k is measured at a specified unit weight for (remoulded) cohesionless soil samples, because its value will vary with the unit weight or density of the sample during the test.

ND: Not Detected
MDL: Method Detection Limit
Source Result: Data used as source for matrix and duplicate samples
%REC: Percent recovery.
RPD: Relative percent difference.

CCME PHC additional information:

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.

Marrissa.Williams@eurofinset.com

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Job ID: 410-66404-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-66404-1

Receipt
The sample was received on 12/10/2021 9:56 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 11.6°C

Receipt Exceptions
The following sample was received at the laboratory outside the required temperature criteria: 1600428-TW1 (410-66404-1). The client was contacted regarding this issue, and the laboratory was instructed to proceed with analysis.

Dioxin
Method 1613B: Any peak area that is the result of interferences from poly-chlorinated diphenyl ethers observed in the sample has been removed from the calculated results prior to reporting the data for totals. 1600428-TW1 (410-66404-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

REGULATION/GUIDELINE REQUIRED

☐ Sanitary Sewer, City:
☐ Storm Sewer, City:
☐ ODWSOG (Use DW CoC if analyzing drinking water)
☐ PWQO
☐ O.Reg 347
☐ Other:

☐ O. Reg 153

The sample results from this submission will form part of a formal Record of Site Condition (RSC) under O.Reg. 153/04. Analysis of full paramter list only Yes ☐ No ☐

Table # ____, Coarse / Fine, Surface / subsurface
Type: Com-Ind / Res-Park / Agri / GW / All Other / Sediment

☐ O. Reg 406 Excess Soils

Table # _____Full depth/Strat/Ceiling/mSPLP Leachate
Type: Com-Ind /Res-Park /Agri/All Other
Category: Surface /Subsurface

The optimal temperature conditions during transport should be less than 10°C. Sample(s) cannot be frozen, unless otherwise indicated or agreed upon with the Laboratory. Note that this COC is not to be used for drinking water samples. The COC must be complete upon submission of the samples, there will be a $25 surcharge if required information is missing (required fields are shaded in grey).

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	No ice present, no attempt to chill
Cooler Temperature is acceptable (</=6C, not frozen).	False	Refer to Job Narrative for details.
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	True	
WV: Container Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
Sample custody seals are intact.	N/A	

Definitions/Glossary

Client: Eurofins Environment Testing Canada
Project/Site: 1968225-PH4398

Job ID: 410-66404-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
cn	Refer to Case Narrative for further detail
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Marrissa.Williams@eurofinset.com

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Narrative

Job Narrative
410-67026-1

Receipt
The samples were received on 12/15/2021 9:37 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 13.8°C

Receipt Exceptions
The following samples were received at the laboratory outside the required temperature criteria: P968398-PH9398 1600846-tw2 (410-67026-1), P968398-PH9398 1600847-tw3 (410-67026-2), P968398-PH9398 1600848-BH1 (410-67026-3) and P968398-PH9398 1600848-BH2 (410-67026-4). The laboratory was instructed to proceed with analysis.

Any peak area that is the result of interferences from poly-chlorinated diphenyl ethers observed in the sample has been removed from the calculated results prior to reporting the data for totals.

Dioxin
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

TURN-AROUND TIME (Business Days)

☐ 1 Day* (100%) ☐ 2 Day** (50%) ☐ 3-5 Days (25%) ☐ 5-7 Days (Standard)

Please contact Lab in advance to determine rush availability.
*For results reported after rush due date, surcharges will apply: before 12:00 - 100%, after 12:00 - 50%.
**For results reported after rush due date, surcharges will apply: before 12:00 - 50%, after 12:00 - 25%.

REGULATION/GUIDELINE REQUIRED

☐ Sanitary Sewer, City:_____
☐ Storm Sewer, City:_____
☐ ODWSOG (Use DW CoC if analyzing drinking water)
☐ PWQO
☐ O.Reg 347
☐ Other:_____

☐ O. Reg 153
The sample results from this submission will form part of a formal Record of Site Condition (RSC) under O.Reg. 153/04. Analysis of full paramter list only Yes ☐ No ☐
Table # ____, Coarse / Fine, Surface / subsurface
Type: Com-ind / Res-Park / Agri / GW / All Other / Sediment

☐ O. Reg 406 Excess Soils
Table # _____Full depth/Strat/Ceiling/mSPLP Leachate
Type: Com-Ind /Res-Park /Agri/All Other
Category: Surface /Subsurface

The optimal temperature conditions during transport should be less than 10°C. Sample(s) cannot be frozen, unless otherwise indicated or agreed upon with the Laboratory. Note that this COC is not to be used for drinking water samples. The COC must be complete upon submission of the samples, there will be a $25 surcharge if required information is missing (required fields are shaded in grey).

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	No ice present, no attempt to chill
Cooler Temperature is acceptable (</=6C, not frozen).	False	Refer to Job Narrative for details.
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	No time on COC or sample containers.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
Sample custody seals are intact.	N/A

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Date Reported: 2021-12-21
Project: PH4398
COC #: 883921

Dear Kirby Magee-Dittburner:

Please find attached the analytical results for your samples. If you have any questions regarding this report, please do not hesitate to call (613-727-5692).

Report Comments:

APPROVAL: _____
Long Qu, Organics Supervisor

All analysis is completed at Eurofins Environment Testing Canada Inc. (Ottawa, Ontario) unless otherwise indicated.

Eurofins Environment Testing Canada Inc. (Ottawa, Ontario) is accredited by CALA, Canadian Association for Laboratory Accreditation to ISO/IEC 17025 for tests which appear on the scope of accreditation. The scope is available at: http://www.cala.ca/scopes/2602.pdf.

Eurofins Environment Testing Canada Inc. (Ottawa, Ontario) is licensed by the Ontario Ministry of the Environment, Conservation, and Parks (MECP) for specific tests in drinking water (license #2318). A copy of the license is available upon request.

Eurofins Environment Testing Canada Inc. (Ottawa, Ontario) is accredited by the Ontario Ministry of Agriculture, Food, and Rural Affairs for specific tests in agricultural soils.

Please note: Field data, where presented on the report, has been provided by the client and is presented for informational purposes only. Guideline values listed on this report are provided for ease of use (informational purposes) only. Eurofins recommends consulting the official provincial or federal guideline as required. Unless otherwise stated, measurement uncertainty is not taken into account when determining guideline or regulatory exceedances.

154 Colonnade Rd. South
Nepean, ON
K2E 7T7
Attention: Mr. Kirby Magee-Dittburner
Invoice to: Paterson Group
PO#: 33461

Report Number:	1968398
Date Submitted:	2021-12-09
Date Reported:	2021-12-21
Project:	PH4398
COC #:	884073
Temperature (C):	19
Custody Seal:	

Dear Kirby Magee-Dittburner:

Please find attached the analytical results for your samples. If you have any questions regarding this report, please do not hesitate to call (613-727-5692).

Report Comments:

Long Qu, Organics Supervisor

All analysis is completed at Eurofins Environment Testing Canada Inc. (Ottawa, Ontario) unless otherwise stated
.
Eurofins Environment Testing Canada Inc. is accredited by CALA, Canadian Association for Laboratory Accreditation to ISO/IEC 17025 for tests which appear on the scope of accrteditation. The scope is available at http://www.cala.ca/scopes/2602.pdf

Please note: Field data, where presented on the report, has been provided by the client and is presented for informational purposes only. Guideline or regulatory limits listed on this report are provided for ease of use (informational purposes) only. Eurofins recommends consulting the official guideline or regulation as required. Unless otherwise stated, measurement uncertainty is not taken into account when determining guideline or regulatory exceedances.

CWS for Petroleum Hydrocarbons in Soil - Tier 1

Notes:

1. The laboratory method complies with CCME Tier 1 reference method for PHC in soil. It is validated for laboratory use.
2. Where the F1 fraction (C6 to C10) and BTEX are both measured, F1-BTEX is reported.
3. Where the F2 fraction (C10 to C16) and naphthalene are both measured, F2-naphthalene is reported.
4. Where the F3 fraction (C16 to C34) and PAHs* are both measured, F3-PAH is reported.
5. F4G is analyzed if the chromatogram does not descend to baseline before C50. Where F4 (C34 to C50) and F4G are both reported, the higher result is compared to the standard.
6. Unless otherwise stated in the sample comments, the following criteria have been met where applicable:

   - nC6 and nC10 response factors within 30% of response factor for toluene;
   - nC10, nC16, and nC34 response factors within 10% of each other;
   - C50 response factors within 70% of nC10 + nC16 + nC34 average; and,
   - Linearity is within 15%.

7. Unless otherwise stated in the sample comments, sampling requirements and analytical holding times have been met.
8. Gravimetric heavy hydrocarbons (F4G) cannot be added to the C6 and C50 hydrocarbons.
9. *PAHs = phenanthrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene and pyrene.

MRL = Method Reporting Limit, AO = Aesthetic Objective, OG = Operational Guideline, MAC = Maximum Acceptable Concentration, IMAC = Interim Maximum Acceptable Concentration, STD = Standard, PWQO = Provincial Water Quality Guideline, IPWQO = Interim Provincial Water Quality Objective, TDR = Typical Desired Range

REGULATION/GUIDELINE REQUIRED

☐ Sanitary Sewer, City: Ottawa

☐ Storm Sewer, City: Ottawa

☐ ODWSOG

☐ PWQO

☐ O. Reg 347/558

☐ Other:

☐ None

☑ O. Reg 153

Table # ___, Course / Fine, Surface / subsurface.

Type: Com-Ind / Res-Park / Agri / GW / All Other / Sediment

☐ Excess Soil, Table: _____ Type: _____

The sample results from this submission will form part of a formal Record of Site Condition (RSC) under O.Reg. 153/04

☐ Yes ☐ No

The optimal temperature conditions during transport should be less than 10°C. Sample(s) cannot be frozen, unless otherwise indicated or agreed upon with the Laboratory. Note that this COC is not to be used for drinking water samples. The COC must be complete upon submission of the samples, there will be a $25 surcharge if required information is missing (required fields are shaded in grey).
